PHASE 06 / PROJECT DOCUMENTATION

Performance Testing

Checking correctness, consistency, usability, and response behavior.

Testing verifies that the dashboard presents calculations accurately and remains understandable when users explore different manufacturers, years, categories, and other supported fields.

01 | Testing goals

- Validate that displayed KPIs match independent calculations.
- Check that filters affect all intended charts consistently.
- Confirm units, labels, category names, and data scope are clear.
- Check behavior with missing values, empty selections, and limited data.
- Record observed load and interaction performance on the actual test setup.

02 | Test environment record

Environment item	Record actual value
Dashboard tool and version	[Tableau Public/Desktop or selected tool]
Operating system and device	[Record test device]
Dataset version	[Filename/version/access date]
Browser (if applicable)	[Name and version]
Tester and test date	[Name and date]

03 | Functional and data tests

ID	Test action	Expected behavior	Outcome
T01	Open the dashboard	Title, purpose, and primary view appear	[Pass/Fail + notes]
T02	Recalculate key KPIs	Values match an independent check	[Pass/Fail + notes]
T03	Filter by manufacturer	Relevant views update consistently	[Pass/Fail + notes]
T04	Combine year/category filters	Results match the selected scope	[Pass/Fail + notes]
T05	Inspect missing values	Unknown data is not silently treated as zero	[Pass/Fail + notes]
T06	Compare chart totals	Units and aggregations are consistent	[Pass/Fail + notes]
T07	Check share calculation	Denominator and scope are clearly defined	[Pass/Fail + notes]
T08	Open source information	Source and limitations are accessible	[Pass/Fail + notes]

04 | Usability and performance checks

ID	Check	Acceptance guide	Observed result
U01	Readable labels	Titles, legends, and units are readable	[Record]
U02	Consistent encoding	Colors and labels remain understandable	[Record]
U03	Filter awareness	Current selections are easy to identify	[Record]
P01	Initial load	Record actual load time	[Seconds/notes]
P02	Filter response	Record actual response time	[Seconds/notes]
P03	Large data behavior	No unexpected failure or misleading partial view	[Record]
P04	Published access	Intended audience can open the shared link	[Record]

05 | Defect and retest log

Issue ID	Description / impact	Priority	Fix and retest status
D-01	[Describe observed issue]	[Low/Med/High]	[Open/Fixed/Retested]
D-02	[Describe observed issue]	[Low/Med/High]	[Open/Fixed/Retested]
D-03	[Describe observed issue]	[Low/Med/High]	[Open/Fixed/Retested]

06 | Exit criteria

- Primary KPI calculations have been independently checked.
- Main filter combinations and navigation have been tested.
- Critical defects are fixed or clearly disclosed.
- Known data limitations are visible in the documentation.
- Final screenshots correspond to the tested version.
- Observed performance is recorded; it is not guessed or promised without measurement.

Testing record

Complete the outcome fields during actual testing. This PDF is a test plan and evidence template, not a claim that the dashboard has already passed every test.
