PHASE 07 / PROJECT DOCUMENTATION

Documentation & Demo

Packaging the project for review, handover, and presentation.

The final phase brings the analytical work together into a clear report, a navigable repository, and a short demonstration focused on user questions and verified findings.

01 | Project summary

Electric Vehicle Market Performance & Insights is designed to help users explore an EV dataset through business-focused analysis. It brings together potential views of manufacturer performance, vehicle categories, battery technologies, driving range, production geography, sales trends, and customer ratings where those fields are available. The intended audience includes market strategists, business intelligence professionals, and sustainable-mobility researchers.

02 | Final report structure

1. Title page, project team, and executive summary.
2. Introduction, business context, and problem statement.
3. Stakeholders, objectives, and functional requirements.
4. Dataset source, license, coverage, and data dictionary.
5. Data cleaning, validation, and metric definitions.
6. Dashboard design, implementation, and interaction flow.
7. Visualizations with findings verified against the dataset.
8. Testing results, known limitations, and future improvements.
9. Conclusion and complete references.

03 | Suggested repository layout

Path	Purpose
README.md	Project overview, features, dataset source, instructions, and links
docs/	Seven phase PDFs and any final report
screenshots/	Final dashboard and story screenshots
data/	Only datasets whose license permits redistribution
analysis/ (optional)	Preparation scripts, notebooks, or metric checks

04 | Demo flow (3–5 minutes)

Time	Screen / activity	Narrative focus
0:00–0:30	Project title and purpose	What user problem the dashboard is intended to solve
0:30–1:00	Dataset/source context	Publisher, coverage, important fields, and limitations
1:00–2:00	Overview dashboard	What each KPI measures and which period it represents
2:00–3:15	Comparison views	Explore manufacturer, category, battery, range, geography, or ratings where available
3:15–4:15	Apply filters	Answer one example question and show the effect of filtering
4:15–5:00	Findings and close	Share only verified observations and explain future scope

05 | Release checklist

- All seven PDFs are present, readable, and named consistently.
- README includes working dashboard, dataset, and demo links where applicable.
- Dataset source and license are documented; restricted files are excluded.
- Dashboard screenshots show the final tested version.
- Numerical findings match calculations and are qualified by the dataset's scope.
- Repository contains no passwords, API keys, or unnecessary personal information.
- Team members and their actual contributions are recorded accurately.

06 | Future enhancement options

REFRESHABLE DATA

Add scheduled updates only when a reliable, permitted source and repeatable process are available.

DEEPER COMPARISON

Add region/year comparisons if coverage and definitions are consistent.

FORECASTING

Evaluate forecasting only after validating historical data and selecting a suitable method.

ACCESSIBILITY

Improve mobile layout, keyboard navigation, labels, and readable color contrast.

07 | References to complete

List the exact dataset title, publisher, URL, access date, and license; official documentation for the dashboard and data-processing tools actually used; and any market reports used to interpret the results. Avoid generic or unverifiable references.

Final note

The repository should make it easy for a reviewer to understand the problem, inspect the analysis, reproduce the workflow where possible, and distinguish verified findings from future plans.
